A Roadmap for the Chemical Industry in Europe towards a Bioeconomy

Partners:

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 745623.

ROADTOBIO

Project Description

How can the European chemical industry remain competitive and at the same time become more sustainable? In order to meet societal needs and help shape the future of the industry, a roadmap is being developed which will outline a path for achieving a 30 per cent share of bio-based products in the organic chemical industry in 2030.

Components of the Roadmap

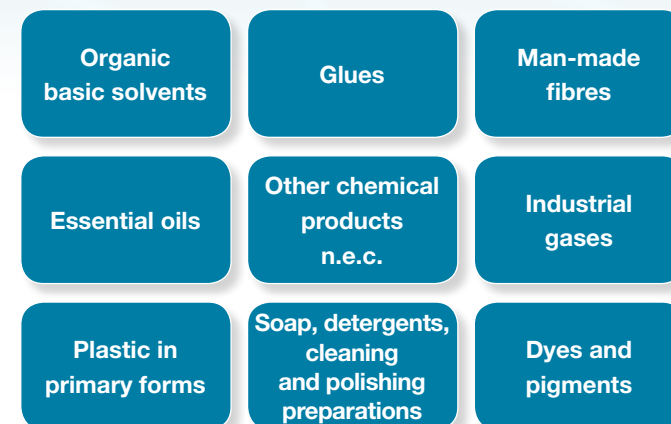

The roadmap will contain **two components**:

- An **analysis** of the **most promising opportunities** for increasing the bio-based portfolio, and the **technical, commercial, regulatory** and **social barriers** to doing so.
- A **strategy, action plan and engagement guide** for achieving the increased bio-based portfolio and for overcoming the existing and anticipated barriers.

www.roadtobio.eu

Definition of the Chemical Industry

RoadToBio seeks to identify new opportunities for bio-based chemicals in the following product sectors:

Expert Platform

RoadToBio will create an **interactive platform of experts**, which brings together the chemical industry, civil society and governing bodies, in order to establish a dialogue on the activities needed to **deliver the full potential of the roadmap**.
